Agrifood Informatics

Biological, Chemical and Health
Informatics for Agriculture and Food

Edited by Matthew Lange, Emily Steliotes
and Bruce German

**ROYAL SOCIETY
OF CHEMISTRY**

Table of contents

Section 1: Food Informatics and Data Science

Chapter 1: Introduction to Food Informatics and Data Science

1.1 Learning Objectives
1.2. The Scope of Food Informatics
1.3. Historical Perspectives
1.4. Emergence of Food Informatics as a scientific field
1.5. Key Terminologies
1.6. Overview of the Book

Chapter 2: Data Science Methods in Agriculture and Food, Science and Technology

2.1. Learning Objectives
2.2. Survey of Data Science in Food Science and Technology
2.3. Data Sources in Food Science and Technology
2.4. Data Collection and Management
2.5. Data Analysis and Interpretation
2.6. Data-Driven Decision Making
2.7. Emerging Trends and Technologies in Data Science
2.8. Case Studies in Data Science

Chapter 3: Cyberinfrastructure in Food Informatics

3.1. Learning Objectives
3.2. Understanding Cyberinfrastructure
3.3. Applications in Food Informatics
3.4. Data Security and Privacy
3.5. Cloud Computing in Food Science and Technology
3.6. Emerging Trends and Technologies in Cyberinfrastructure
3.7. Case Studies in Cyberinfrastructure

Chapter 4: Artificial Intelligence and Machine Learning in Food Informatics

4.1. Learning Objectives
4.2. Fundamentals of AI and Machine Learning
4.3. AI Applications in Food Science and Technology
4.4. Machine Learning Models for Food Data
4.5. Deep Learning and Neural Networks
4.6. Emerging Trends and Technologies in AI and Machine Learning
4.7. Case Studies in AI and Machine Learning

Section 2: Informatics Methods for Food Science

Chapter 5: Foodomics and Food Informatics

5.1. Learning Objectives
5.2. Introduction to Foodomics
5.3. Genomics, Proteomics, and Metabolomics in Food Science
5.4. Other "omics" technologies in Food Science
5.5. Linking Foodomics and Food Informatics
5.6. Emerging Trends and Technologies in Foodomics
5.7. Case Studies in Foodomics

Chapter 6: Informatics Methods for Food Chemistry

6.1. Learning Objectives
6.2. Survey of Informatics Methods for Food Chemistry
6.3. Analytical Techniques Food Chemistry
   6.3.1. Spectroscopy and Chromatography
   6.3.2. Mass Spectrometry
6.4. Data Integration and Analysis
6.5. Emerging Trends and Technologies in Food Chemistry
6.6. Case Studies in Food Chemistry

Chapter 7: Informatics Methods for Food Microbiology

7.1. Learning Objectives
7.2. Survey of Informatics Methods for Food Microbiology
7.3. Food Microbiology and Safety
7.4. Microbiome Analysis in Food and Nutrition
7.5. Emerging Trends and Technologies in Food Microbiology
7.6. Case Studies in Food Microbiology

Chapter 8: Food Composition Databases

8.1. Learning Objectives
8.2. Food Composition Data as Infrastructure for Food Systems Innovation
8.3. Historical Evolution of Food Composition Databases
8.4. Mapping the Landscape: Attributes and Variability of FCDBs
8.5. Applying FAIR Principles to Food Composition Data
8.6. Expanding Use Cases and Stakeholders of FCDBs and Ontologies
8.7. Emerging Trends in Food Composition Databases and Ontologies
8.8. Case Studies in Food Composition Databases: FAIR Food Data in Practice

Section 3: Food Informatics across Food Systems

Chapter 9: Food Informatics for Land Use Decision Making

9.1. Learning Objectives
9.2. Introduction to Land Use Planning in Food Systems
9.3. Geographic Information Systems (GIS) in Food Land Use
9.4. Sustainability and Land Use
9.5. Emerging Trends and Technologies in Land Use Decision Making
9.6. Case Studies in Land Use Decision Making

Chapter 10: Agricultural Informatics

10.1. Learning Objectives
10.2. Introduction to Agricultural Informatics
10.3. Precision Agriculture and Data
10.4. Farm Management Systems
10.5. Crop Monitoring and Analysis
10.6. Emerging Trends and Technologies in Agricultural Informatics
10.7. Case Studies in Agricultural Informatics

Chapter 11: Informatics for the Food Supply Chain and Traceability Systems

11.1. Learning Objectives
11.2. Introduction to Food Supply Chain Informatics
11.3. Food Informatics in Traceability and Transparency
11.4. Informatics for Food Supply Chain Optimization
11.5. Food Logistics, Distribution, and Access
11.6. Emerging Trends and Digital Transformation in Food Supply Chains
    11.6.1. Internet of Things (IoT) in Food
    11.6.2. Blockchain and Food Traceability, Transparency, and Trust
    11.6.3. Procurement and Regulation across the Food Supply Chain
11.7. Case Studies in Food Supply Chains

Chapter 12: Informatics for Food Processing

12.1. Learning Objectives
12.2. Introduction to Food Processing
   12.2.1 Historical Trends and Drivers
   12.2.2 Health Implications
12.3. Current Frameworks for Evaluating and Quantifying Food Processing
   12.3.1 NOVA Classification
   12.3.2 Other Food Processing Classification Systems
   12.3.3 Food Processing Ontologies and Indexing Systems
12.4. Emerging Trends to Assess Food Processing
   12.4.1 Machine Learning and Artificial Intelligence
   12.4.2 Towards a Deeper Understanding of Food Processing
12.5. Case Study in Food Processing
   12.5.1 Simple Models
   12.5.2 Models with FoodProX
   12.5.3 Leveraging Large Language Models

Chapter 13: Food Safety Informatics

13.1. Learning Objectives
13.2. Introduction to Food Safety Informatics
13.3. Informatics for Food Safety Regulations and Compliance
13.4. Informatics for Foodborne Pathogen Detection/Monitoring
13.5. Informatics for Traceability and Recall Systems
13.6. Emerging Trends and Technologies in Food Safety Informatics
13.7. Case Studies in Food Safety Informatics

Chapter 14: Informatics for Food Packaging Technologies

14.1. Learning Objectives
14.2. Introduction to Food Packaging and Historical Perspectives
   14.2.1. Data across Packaging Sustainability and Environmental Impacts
14.3. Packaging Functions and Objectives
   14.3.1. Food Safety
   14.3.2. Preservation and Shelf-Life Extension
14.4. Sustainable and Biobased Packaging Technologies
14.5. Emerging Trends and Technologies in Food Packaging
14.6. Case Studies in Food Packaging

Chapter 15: Flavor and Sensory Science in Food Informatics

15.1. Learning Objectives
15.2. Survey of Flavor and Sensory Science
15.3. Sensory Evaluation Methods
15.4. Flavor Chemistry and Analysis
15.5. Sensory Data Analysis
15.6. Consumer Preferences and Product Development
15.7. Emerging Trends and Technologies in Flavor and Sensory Science
15.8. Case Studies in Flavor and Sensory Science

Section 4: Food Informatics for Health and Sustainability

Chapter 16: Nutrition Informatics

16.1. Learning Objectives
16.2. Introduction to Nutrition Informatics
16.3. Nutritional Assessment and Analysis
16.4. Dietary Intake Monitoring
16.5. Personalized Nutrition and Health
16.6. Emerging Trends and Technologies in Nutrition Informatics
16.7. Case Studies in Nutrition Informatics

Chapter 17: Informatics for the Circular Economy of Food

17.1. Learning Objectives
17.2. Introduction to the Circular Economy of Food
17.3. Classifying Food Waste and Processing Streams
17.4. Food Waste Reduction
17.5. Food Waste Valorization
17.6. Emerging Trends and Technologies in the Circular Economy of Food
17.7. Case Studies in the Circular Economy of Food

Chapter 18: Informatics for Food Supply Networks

18.1. Learning Objectives
18.2. Introduction to Food Supply Networks
18.3. Information Asymmetry
18.4. Role of the Public Sector In Shaping Food Supply Networks
18.5. Case Studies in Policy Applications

Chapter 19: City Planning and Local Food Access

19.1. Learning Objectives
19.2. Introduction to City Planning and Local Food Access
19.3. Importance of Food Accessibility in City Planning
19.4. Emerging Trends and Technologies
19.5. Case Studies

Section 5: Food Informatics in (Policy and) Practice

Chapter 20: Global Innovationformatics in AgriFood Informatics

19.1. Learning Objectives
19.2. Informatics for Food Security
19.3. Informatics for Global Access to Healthy Diets
19.4. Emerging Trends and Technologies in Food Security
19.5. Case Studies in Informatics for Food Economics

Chapter 21: The Economics and Governance of (Digital) Data in AgriFood Informatics

21.1. Learning Objectives
21.2. Introduction to Food Economics and Policy
21.3. Leveraging Informatics for Developmental Economics and Food Policy Development
21.4. Global Trade and Regulations
21.5. Behavioral Economics for Improved Health and Sustainability
21.6. Emerging Trends and Technologies in Food Economics Policy
21.7. Case Studies in Food Economics and Policy

Chapter 22: Cybersecurity for AgriFood Systems

22.1. Learning Objectives
22.2. Introduction to Cybersecurity for AgriFood Scientists and Technologists
22.3. Technologies used in Modern AgriFood
22.4. Cybersecurity for AgriFood: Principles, Best Practices
22.5. Emerging Trends and Technologies in AgriFood Cybersecurity
22.6. Case Studies in Cybersecurity for AgriFood systems

Chapter 23: Ethical AI and Agro-Informatics: Sustaining a Commons-Enabling Infrastructure for Agricultural Knowledge

23.1. Learning Objectives
23.2. Introduction: From Efficiency to Stewardship
23.3. Defining Commons-Enabling Infrastructure (CEI)
23.4. The Ethical AI Imperative in Agro-Informatics
23.5. Barriers to Sustainable Knowledge Infrastructure
23.6. Trust Architecture and Governance Models
23.7. Technical and Social Tools for Commons Infrastructure
23.8. Case Studies
23.9. Emerging Trends and Future Directions
23.10. Toward a Commons of Agricultural Intelligence

Chapter 24: AgriFood Informatics and Innovations in Teaching, Learning, Training, and Workforce Development

24.1 Learning Objectives
24.2 Introduction: Why Innovation in AgriFood Learning Matters
24.3 Microcredentials, Digital Badges, and Modular Learning Pathways
24.4 Verifiable Credentials, Blockchain, and the Internet of Education
24.5 Data Infrastructure and Interoperability for Workforce Ecosystems
24.6 Emerging Trends and Technologies
24.7 Case Studies
24.8 A Roadmap for the Future of Food Systems Education

Chapter 25 Food Informatics: A New Frontier in Food Science and Technology

25.1. Learning Objectives
25.2. Future Directions in Food Informatics
25.3. The Evolving Landscape of Food Informatics
25.4. Food Informatics as a Field of Study
25.5. Food Informatics as a Career Path
25.6. Additional Resources in Food Informatics
